Network Time Protocol

[NTP chrony](#)

1. Overview

WebADM requires an accurate system clock and timezone. Your Linux server should be configured with NTP time synchronization. This guide will show how to install and configure the NTP server. Network Time Protocol traffic runs over port 123 UDP. At [RCDevs Hardening Guide](#) are firewall rules examples.

The RCDevs Virtual Appliance uses chrony instead of ntp.

2. Check Installed Packages

2.1. CentOS 7, 8, Stream

Please, verify if NTP or Chrony packages are already installed.

```
[root@centos7-client ~]# yum info ntp
Failed to set locale, defaulting to C
Loaded plugins: fastestmirror, langpacks
Loading mirror speeds from cached hostfile
* base: mirror.dclux.com
* extras: mirror.dclux.com
* updates: mirror.dclux.com
* marcus duarte modified
Installed Packages
Name      : ntp
Arch      : x86_64
Version   : 4.2.6p5
Release   : 28.el7.centos
Size      : 1.4 M
Repo      : installed
From repo : anaconda
Summary   : The NTP daemon and utilities
URL       : http://www.ntp.org
License   : (MIT and BSD and BSD with advertising) and GPLv2
Description : The Network Time Protocol (NTP) is used to synchronize a
: computer's time with another reference time source. This package
: includes ntpd (a daemon which continuously adjusts system time)
: and utilities used to query and configure the ntpd daemon.
:
: Perl scripts ntp-wait and ntptrace are in the ntp-perl package,
: ntpdate is in the ntpdate package and sntp is in the sntp package.
: The documentation is in the ntp-doc package.
```

```

[root@centos7-client ~]# yum info chrony
Failed to set locale, defaulting to C
Loaded plugins: fastestmirror, langpacks
Loading mirror speeds from cached hostfile
* base: mirror.dclux.com

* updates: mirror.dclux.com
Installed Packages
Name      : chrony
Arch     : x86_64
Version  : 3.2
Release  : 2.el7
Size     : 476 k
Repo     : installed
From repo : anaconda
Summary  : An NTP client/server
URL      : https://chrony.tuxfamily.org
License  : GPLv2
Description : A client/server for the Network Time Protocol, this program keeps
            : your computer's clock accurate. It was specially designed to
            : support systems with intermittent internet connections, but it
            : also works well in permanently connected environments. It can use
            : also hardware reference clocks, system real-time clock or manual
            : input as time references.

[root@centos7-client ~]#

```

In this example, NTP and Chrony are installed. Only use one service to sync time, therefore, remove one.

```

[root@centos7-client ~]# yum remove ntp

[root@rcdevs1 ~]#

Let's enable and start the chrony daemon service at boot.

```

[root@rcdevs1 ~]# systemctl start chronyd
[root@rcdevs1 ~]# systemctl status chronyd
● chronyd.service - NTP client/server
   Loaded: loaded (/usr/lib/systemd/system/chronyd.service; enabled; vendor preset: enabled)
   Active: active (running) since Thu 2019-02-14 15:25:29 CET; 5s ago
     Docs: man:chronyd(8)
           man:chrony.conf(5)
   Process: 16590 ExecStartPost=/usr/libexec/chrony-helper update-daemon (code=exited,
status=0/SUCCESS)
   Process: 16586 ExecStart=/usr/sbin/chronyd $OPTIONS (code=exited, status=0/SUCCESS)
  Main PID: 16588 (chronyd)
    CGroup: /system.slice/chronyd.service
            └─16588 /usr/sbin/chronyd

Feb 14 15:25:29 rcdevs1.webadm1 systemd[1]: Starting NTP client/server...
Feb 14 15:25:29 rcdevs1.webadm1 chronyd[16588]: chronyd version 3.2 starting (+CMDMON +NTP
+REFCLOCK...UG)
Feb 14 15:25:29 rcdevs1.webadm1 chronyd[16588]: Initial frequency -100.000 ppm
Feb 14 15:25:29 rcdevs1.webadm1 systemd[1]: Started NTP client/server.
Feb 14 15:25:35 rcdevs1.webadm1 chronyd[16588]: Selected source 188.42.54.79
Hint: Some lines were ellipsized, use -l to show in full.
[root@rcdevs1 ~]# systemctl enable chronyd
[root@rcdevs1 ~]#

```

3.1.2. Time Zone

Be sure that the correct time zone is set. Verify it with the `timedatectl` command.

```

[root@rcdevs1 ~]# timedatectl
   Local time: Thu 2019-02-14 14:32:02 CET
   Universal time: Thu 2019-02-14 13:32:02 UTC
     RTC time: Thu 2019-02-14 13:32:02
   Time zone: Europe/Luxembourg (CET, +0100)
   NTP enabled: yes
NTP synchronized: yes
  RTC in local TZ: no
     DST active: no
Last DST change: DST ended at
                  Sun 2018-10-28 02:59:59 CEST
                  Sun 2018-10-28 02:00:00 CET
Next DST change: DST begins (the clock jumps one hour forward) at
                  Sun 2019-03-31 01:59:59 CET
                  Sun 2019-03-31 03:00:00 CEST
[root@rcdevs1 ~]#

```

To change it, get the list of all available time zones with `timedatectl list-timezones` and set it with

`timedatectl set-timezone Europe/Berlin` for example.

```
[root@rcdevs1 ~]# timedatectl list-timezones
Africa/Abidjan
Africa/Accra
Africa/Addis_Ababa
Africa/Algiers
...
[root@rcdevs1 ~]# timedatectl set-timezone Europe/Berlin
[root@rcdevs1 ~]# timedatectl
    Local time: Thu 2019-02-14 14:34:51 CET
    Universal time: Thu 2019-02-14 13:34:51 UTC
    RTC time: Thu 2019-02-14 13:34:52
    Time zone: Europe/Berlin (CET, +0100)
    NTP enabled: yes
    NTP synchronized: yes
    RTC in local TZ: no
    DST active: no
    Last DST change: DST ended at
        Sun 2018-10-28 02:59:59 CEST
        Sun 2018-10-28 02:00:00 CET
    Next DST change: DST begins (the clock jumps one hour forward) at
        Sun 2019-03-31 01:59:59 CET
        Sun 2019-03-31 03:00:00 CEST
[root@rcdevs1 ~]#
```

3.1.3. Public Pool Time Servers

At [NTP Public Pool Time Servers](#), choose your Continent and Country. In this example, we choose Europe Luxembourg.

```
server 2.lu.pool.ntp.org
server 0.europe.pool.ntp.org
server 1.europe.pool.ntp.org
```

3.1.4. Configuration

Now, replace the default list of Public Pool Time Servers with the ones for your country. Set your Pool Time Server in the chrony configuration file `/etc/chrony.conf`.

```
[root@rcdevs1 ~]# vi /etc/chrony.conf

# Use public servers from the pool.ntp.org project.
# Please consider joining the pool (http://www.pool.ntp.org/join.html).
server 2.lu.pool.ntp.org iburst
server 0.europe.pool.ntp.org iburst
server 1.europe.pool.ntp.org iburst

# Record the rate at which the system clock gains/losses time.
driftfile /var/lib/chrony/drift

# Allow the system clock to be stepped in the first three updates
# if its offset is larger than 1 second.
makestep 1.0 3

# Enable kernel synchronization of the real-time clock (RTC).
rtcsync

# Enable hardware timestamping on all interfaces that support it.
#hwtimestamp *

# Increase the minimum number of selectable sources required to adjust
# the system clock.
#minsources 2

# Allow NTP client access from local network.
#allow 192.168.0.0/16

# Serve time even if not synchronized to a time source.
#local stratum 10

# Specify file containing keys for NTP authentication.
#keyfile /etc/chrony.keys

# Specify directory for log files.
logdir /var/log/chrony

# Select which information is logged.
#log measurements statistics tracking
[root@rcdevs1 ~]#
```

Afterward, restart the chrony daemon with `systemctl restart chronyd`. Verify its status with `systemctl status chronyd -l`.

```
[root@rcdevs1 ~]# systemctl restart chronyd
[root@rcdevs1 ~]# systemctl status chronyd -l
● chronyd.service - NTP client/server
   Loaded: loaded (/usr/lib/systemd/system/chronyd.service; enabled; vendor preset: enabled)
   Active: active (running) since Thu 2019-02-14 15:30:59 CET; 5s ago
     Docs: man:chronyd(8)
           man:chrony.conf(5)
   Process: 16633 ExecStartPost=/usr/libexec/chrony-helper update-daemon (code=exited,
status=0/SUCCESS)
   Process: 16629 ExecStart=/usr/sbin/chronyd $OPTIONS (code=exited, status=0/SUCCESS)
  Main PID: 16631 (chronyd)

[root@rcdevs1 ~]#

```

3.1.6. Verify Sync

Do the following steps to verify that the NTP daemon is really synchronizing the time. Query the system clock with the command

```
timedatectl status.
```

```
[root@rcdevs1 ~]# timedatectl status
Local time: Thu 2019-02-14 15:36:48 CET
Universal time: Thu 2019-02-14 14:36:48 UTC
RTC time: Thu 2019-02-14 14:36:48
Time zone: Europe/Luxembourg (CET, +0100)
NTP enabled: yes
NTP synchronized: yes
RTC in local TZ: no
DST active: no
Last DST change: DST ended at
    Sun 2018-10-28 02:59:59 CEST
    Sun 2018-10-28 02:00:00 CET
Next DST change: DST begins (the clock jumps one hour forward) at
    Sun 2019-03-31 01:59:59 CET
    Sun 2019-03-31 03:00:00 CEST
[root@rcdevs1 ~]#
```

Verify if the NTP synchronization works. First, disable NTP synchronization with `timedatectl set-ntp false`. Afterward, change the system clock with `timedatectl set-time 10:00:00`, for example.

```
[root@rcdevs1 ~]# timedatectl set-ntp false
[root@rcdevs1 ~]# timedatectl set-time 10:00:00
[root@rcdevs1 ~]# timedatectl status
Local time: Thu 2019-02-14 10:00:07 CET
Universal time: Thu 2019-02-14 09:00:07 UTC
RTC time: Thu 2019-02-14 09:00:08
Time zone: Europe/Luxembourg (CET, +0100)
NTP enabled: no
NTP synchronized: no
RTC in local TZ: no
DST active: no
Last DST change: DST ended at
    Sun 2018-10-28 02:59:59 CEST
    Sun 2018-10-28 02:00:00 CET
Next DST change: DST begins (the clock jumps one hour forward) at
    Sun 2019-03-31 01:59:59 CET
    Sun 2019-03-31 03:00:00 CEST
[root@rcdevs1 ~]#
```

Now, enable the NTP synchronization with `timedatectl set-ntp true` and verify it with `timedatectl status`.

```
[root@rcdevs1 ~]# timedatectl set-ntp true
[root@rcdevs1 ~]# timedatectl status
    Local time: Thu 2019-02-14 15:39:02 CET
    Universal time: Thu 2019-02-14 14:39:02 UTC
    RTC time: Thu 2019-02-14 09:00:58

[root@rcdevs1 ~]#
```

More information about chrony at [Chrony](#).

3.2. Ubuntu 18.04 and 20.04

3.2.1. Install Chrony

First, install the chrony package with the command `apt-get install chrony`.

```
root@ubuntu18-webadm1:/home/webadm1# apt-get install chrony
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following additional packages will be installed:
  libnspr4 libnss3
The following NEW packages will be installed:
  chrony libnspr4 libnss3
0 upgraded, 3 newly installed, 0 to remove and 0 not upgraded.
Need to get 1,449 kB of archives.
After this operation, 4,549 kB of additional disk space will be used.

46.29.177.17
root@ubuntu18-webadm1:/home/webadm1#
```

3.2.2. Time Zone

Be sure that the correct time zone is set. Verify it with the `timedatectl` command.

```
root@ubuntu18-webadm1:/home/webadm1# timedatectl
   Local time: Fri 2019-03-08 14:08:08 UTC
   Universal time: Fri 2019-03-08 14:08:08 UTC
     RTC time: Fri 2019-03-08 14:08:08
   Time zone: Etc/UTC (UTC, +0000)
 System clock synchronized: yes
systemd-timesyncd.service active: yes
   RTC in local TZ: no
root@ubuntu18-webadm1:/home/webadm1#
```

To change it, get the list of all available time zones with `timedatectl list-timezones` and set it with `timedatectl set-timezone Europe/Luxembourg` for example.

```
root@ubuntu18-webadm1:/home/webadm1# timedatectl list-timezones
Africa/Abidjan
Africa/Accra
Africa/Addis_Ababa
Africa/Algiers
...
root@ubuntu18-webadm1:/home/webadm1# timedatectl set-timezone Europe/Luxembourg
root@ubuntu18-webadm1:/home/webadm1# timedatectl
          Local time: Fri 2019-03-08 15:11:45 CET
          Universal time: Fri 2019-03-08 14:11:45 UTC
          RTC time: Fri 2019-03-08 14:11:45
          Time zone: Europe/Luxembourg (CET, +0100)
System clock synchronized: yes
systemd-timesyncd.service active: yes
          RTC in local TZ: no
root@ubuntu18-webadm1:/home/webadm1#
```

3.2.3. Public Pool Time Servers

At [NTP Public Pool Time Servers](#), choose your Continent and Country. In this example, we choose Europe Luxembourg.

```
server 2.lu.pool.ntp.org
server 0.europe.pool.ntp.org
server 1.europe.pool.ntp.org
```

3.2.4. Configuration

Now, replace the default list of Public Pool Time Servers with the ones for your country. Set your Pool Time Server in the chrony configuration file `/etc/chrony/chrony.conf`.

```
root@ubuntu18-webadm1:/home/webadm1# vi /etc/chrony/chrony.conf
# Welcome to the chrony configuration file. See chrony.conf(5) for more
# information about usable directives.

# This will use (up to):
# - 4 sources from ntp.ubuntu.com which some are ipv6 enabled
# - 2 sources from 2.ubuntu.pool.ntp.org which is ipv6 enabled as well
# - 1 source from [01].ubuntu.pool.ntp.org each (ipv4 only atm)
# This means by default, up to 6 dual-stack and up to 2 additional IPv4-only
# sources will be used.
# At the same time it retains some protection against one of the entries being
# down (compare to just using one of the lines). See (LP: #1754358) for the
# discussion.
#
# About using servers from the NTP Pool Project in general see (LP: #104525).
# Approved by Ubuntu Technical Board on 2011-02-08.
# See http://www.pool.ntp.org/join.html for more information.
server 2.lu.pool.ntp.org iburst
server 0.europe.pool.ntp.org iburst
server 1.europe.pool.ntp.org iburst

# This directive specify the location of the file containing ID/key pairs for
# NTP authentication.
keyfile /etc/chrony/chrony.keys

# This directive specify the file into which chronyd will store the rate
# information.
driftfile /var/lib/chrony/chrony.drift

# Uncomment the following line to turn logging on.
#log tracking measurements statistics

# Log files location.
logdir /var/log/chrony

# Stop bad estimates upsetting machine clock.
maxupdateskew 100.0

# This directive enables kernel synchronisation (every 11 minutes) of the
# real-time clock. Note that it can't be used along with the 'rtcfile' directive.
rtcsync

# Step the system clock instead of slewing it if the adjustment is larger than
# one second, but only in the first three clock updates.
makestep 1 3

root@ubuntu18-webadm1:/home/webadm1#
```

Afterward, restart the chrony daemon with `systemctl restart chronyd`. Verify its status with `systemctl status chronyd`.

```
root@ubuntu18-webadm1:/home/webadm1# systemctl restart chronyd
root@ubuntu18-webadm1:/home/webadm1# systemctl status chronyd
● chrony.service - chrony, an NTP client/server
   Loaded: loaded (/lib/systemd/system/chrony.service; enabled; vendor preset: enabled)
   Active: active (running) since Fri 2019-03-08 15:29:55 CET; 9s ago
     Docs: man:chronyd(8)
           man:chronyc(1)
           man:chrony.conf(5)
   Process: 2267 ExecStartPost=/usr/lib/chrony/chrony-helper update-daemon (code=exited,

root@ubuntu18-webadm1:/home/webadm1#

```

3.2.6. Verify Sync

Do the following steps to verify that the NTP daemon is really synchronizing the time. Query the system clock with the command

```
timedatectl status.
```

```
root@ubuntu18-webadm1:/home/webadm1# timedatectl status
    Local time: Fri 2019-03-08 15:32:29 CET
    Universal time: Fri 2019-03-08 14:32:29 UTC
    RTC time: Fri 2019-03-08 14:32:29
    Time zone: Europe/Luxembourg (CET, +0100)
System clock synchronized: yes
systemd-timesyncd.service active: yes
    RTC in local TZ: no
root@ubuntu18-webadm1:/home/webadm1#
```

Verify if the NTP synchronization works. First, disable NTP synchronization with `timedatectl set-ntp false`. Afterward, change the system clock with `timedatectl set-time 10:00:00`, for example.

```
root@ubuntu18-webadm1:/home/webadm1# timedatectl set-ntp false
root@ubuntu18-webadm1:/home/webadm1# timedatectl set-time 10:00:00
root@ubuntu18-webadm1:/home/webadm1# timedatectl status
    Local time: Fri 2019-03-08 10:00:05 CET
    Universal time: Fri 2019-03-08 09:00:05 UTC
    RTC time: Fri 2019-03-08 09:00:06
    Time zone: Europe/Luxembourg (CET, +0100)
System clock synchronized: no
systemd-timesyncd.service active: no
    RTC in local TZ: no
root@ubuntu18-webadm1:/home/webadm1#
```

Now, enable the NTP synchronization with `timedatectl set-ntp true` and verify it with `timedatectl status`.

```
root@ubuntu18-webadm1:/home/webadm1# timedatectl set-ntp true
root@ubuntu18-webadm1:/home/webadm1# timedatectl status
    Local time: Fri 2019-03-08 15:33:34 CET
    Universal time: Fri 2019-03-08 14:33:34 UTC
    RTC time: Fri 2019-03-08 09:00:37
    Time zone: Europe/Luxembourg (CET, +0100)
System clock synchronized: yes
systemd-timesyncd.service active: yes
    RTC in local TZ: no
root@ubuntu18-webadm1:/home/webadm1#
```

More information about chrony at [Chrony](#).

4. NTP

4.1. CentOS 7

4.1.1. Install NTP

First, install the ntp package with the command `yum install ntp`.

```

Next DST change: DST begins (the clock jumps one hour forward) at
    Sun 2019-03-31 01:59:59 CET
    Sun 2019-03-31 03:00:00 CEST
[root@rcdevs1 ~]#
```

4.1.3. Public Pool Time Servers

At [NTP Public Pool Time Servers](#), choose your Continent and Country. In this example, we choose Europe Luxembourg.

```
server 2.lu.pool.ntp.org
server 0.europe.pool.ntp.org
server 1.europe.pool.ntp.org
```

4.1.4. Configuration

Now, replace the default list of Public Pool Time Servers with the ones for your country. Therefore, edit the following NTP daemon configuration file `/etc/ntp.conf` and also add `logfile /var/log/ntp.log`.

```
[root@rcdevs1 ~]# vi /etc/ntp.conf
# For more information about this file, see the man pages
# ntp.conf(5), ntp_acc(5), ntp_auth(5), ntp_clock(5), ntp_misc(5), ntp_mon(5).

driftfile /var/lib/ntp/drift

# Permit time synchronization with our time source, but do not
# permit the source to query or modify the service on this system.
restrict default nomodify notrap nopeer noquery

# Permit all access over the loopback interface. This could
# be tightened as well, but to do so would effect some of
# the administrative functions.
restrict 127.0.0.1
#restrict ::1

# Hosts on local network are less restricted.
#restrict 192.168.1.0 mask 255.255.255.0 nomodify notrap

# Use public servers from the pool.ntp.org project.
# Please consider joining the pool (http://www.pool.ntp.org/join.html).
server 2.lu.pool.ntp.org iburst
server 0.europe.pool.ntp.org iburst

[root@rcdevs1 ~]#

```

4.1.5. Sync Time

Force a time synchronization and specify an NTP server with the command `ntpdate -u 2.lu.pool.ntp.org`.

```

[root@rcdevs1 ~]# ntpdate -u 2.lu.pool.ntp.org
14 Feb 13:51:17 ntpdate[16373]: adjust time server 85.93.216.115 offset 0.018919 sec
[root@rcdevs1 ~]#

```

Show the NTP report with `ntpstat`.

```

[root@rcdevs1 ~]# ntpstat
synchronised to NTP server (185.137.97.5) at stratum 3
  time correct to within 80 ms
  polling server every 64 s
[root@rcdevs1 ~]#

```

4.1.6. Verify Sync

Do the following steps to verify that the NTP daemon is really synchronizing the time. Query the system clock with the command `timedatectl status`.

```
[root@rcdevs1 ~]# timedatectl status
Local time: Thu 2019-02-14 11:53:44 CET
Universal time: Thu 2019-02-14 10:53:44 UTC
RTC time: Thu 2019-02-14 10:53:44
Time zone: Europe/Luxembourg (CET, +0100)
NTP enabled: yes
NTP synchronized: yes
RTC in local TZ: no
DST active: no
Last DST change: DST ended at
    Sun 2018-10-28 02:59:59 CEST
    Sun 2018-10-28 02:00:00 CET
Next DST change: DST begins (the clock jumps one hour forward) at
    Sun 2019-03-31 01:59:59 CET
    Sun 2019-03-31 03:00:00 CEST
[root@rcdevs1 ~]#
```

Verify if the NTP synchronization works. First, disable NTP synchronization with `timedatectl set-ntp false`. Afterward, change the system clock with `timedatectl set-time 10:00:00`, for example.

```
[root@rcdevs1 ~]# timedatectl set-ntp false
[root@rcdevs1 ~]# timedatectl set-time 10:00:00
[root@rcdevs1 ~]# timedatectl status
Local time: Thu 2019-02-14 10:00:01 CET
Universal time: Thu 2019-02-14 09:00:01 UTC
RTC time: Thu 2019-02-14 09:00:02
Time zone: Europe/Luxembourg (CET, +0100)
NTP enabled: no
NTP synchronized: no
RTC in local TZ: no
DST active: no
Last DST change: DST ended at
    Sun 2018-10-28 02:59:59 CEST
    Sun 2018-10-28 02:00:00 CET
Next DST change: DST begins (the clock jumps one hour forward) at
    Sun 2019-03-31 01:59:59 CET
    Sun 2019-03-31 03:00:00 CEST
[root@rcdevs1 ~]#
```

Now, enable the NTP synchronization with `timedatectl set-ntp true` and verify it with `timedatectl status`.

```
[root@rcdevs1 ~]# timedatectl set-ntp true
[root@rcdevs1 ~]# timedatectl status
    Local time: Thu 2019-02-14 11:56:54 CET
    Universal time: Thu 2019-02-14 10:56:54 UTC
    RTC time: Thu 2019-02-14 09:00:53
    Time zone: Europe/Luxembourg (CET, +0100)
    NTP enabled: yes
    NTP synchronized: yes
    RTC in local TZ: no
    DST active: no
    Last DST change: DST ended at
        Sun 2018-10-28 02:59:59 CEST
        Sun 2018-10-28 02:00:00 CET
    Next DST change: DST begins (the clock jumps one hour forward) at
        Sun 2019-03-31 01:59:59 CET
        Sun 2019-03-31 03:00:00 CEST
[root@rcdevs1 ~]#
```

4.2. Ubuntu 18.04 and 20.04

4.2.1. Install NTP

First, install the ntp package with the command `apt-get install ntp`.

```

root@ubuntu18-webadm1:/home/webadm1#
```

4.2.2. Time Zone

Be sure that the correct time zone is set. Verify it with the `timedatectl` command.

```
root@ubuntu18-webadm1:/home/webadm1# timedatectl
   Local time: Fri 2019-03-08 14:46:56 UTC
   Universal time: Fri 2019-03-08 14:46:56 UTC
     RTC time: Fri 2019-03-08 14:46:56
   Time zone: Etc/UTC (UTC, +0000)
 System clock synchronized: yes
systemd-timesyncd.service active: yes
   RTC in local TZ: no
root@ubuntu18-webadm1:/home/webadm1#
```

To change it, get the list of all available time zones with `timedatectl list-timezones` and set it with `timedatectl set-timezone Europe/Luxembourg` for example.

```
root@ubuntu18-webadm1:/home/webadm1# timedatectl list-timezones
Africa/Abidjan
Africa/Accra
Africa/Addis_Ababa
Africa/Algiers
...
root@ubuntu18-webadm1:/home/webadm1# timedatectl set-timezone Europe/Luxembourg
root@ubuntu18-webadm1:/home/webadm1# timedatectl
          Local time: Fri 2019-03-08 15:47:48 CET
          Universal time: Fri 2019-03-08 14:47:48 UTC
          RTC time: Fri 2019-03-08 14:47:48
          Time zone: Europe/Luxembourg (CET, +0100)
System clock synchronized: yes
systemd-timesyncd.service active: yes
          RTC in local TZ: no
root@ubuntu18-webadm1:/home/webadm1#
```

4.2.3. Public Pool Time Servers

At [NTP Public Pool Time Servers](#), choose your Continent and Country. In this example, we choose Europe Luxembourg.

```
server 2.lu.pool.ntp.org
server 0.europe.pool.ntp.org
server 1.europe.pool.ntp.org
```

4.2.4. Configuration

Now, replace the default list of Public Pool Time Servers with the ones for your country. Therefore, edit the following NTP daemon configuration file `/etc/ntp.conf`.

```
root@ubuntu18-webadm1:/home/webadm1# vi /etc/ntp.conf

# Leap seconds definition provided by tzdata
leapfile /usr/share/zoneinfo/leap-seconds.list

# Enable this if you want statistics to be logged.
#statsdir /var/log/ntpstats/

statistics loopstats peerstats clockstats
filegen loopstats file loopstats type day enable
filegen peerstats file peerstats type day enable
filegen clockstats file clockstats type day enable

# Specify one or more NTP servers.

# Use servers from the NTP Pool Project. Approved by Ubuntu Technical Board
```

```
# Use servers from the NTP Pool Project. Approved by Ubuntu Technical Board
# on 2011-02-08 (LP: #104525). See http://www.pool.ntp.org/join.html for
# more information.
server 2.lu.pool.ntp.org iburst
server 0.europe.pool.ntp.org iburst
server 1.europe.pool.ntp.org iburst

# Use Ubuntu's ntp server as a fallback.
#pool ntp.ubuntu.com

4.2.5. Sync Time

Force a time synchronization with the command `ntpq -p`.

```
root@ubuntu18-webadm1:/home/webadm1# ntpq -p
  remote           refid      st t when poll reach  delay  offset jitter
=====
+alpha.derg.xyz 192.60.141.183 3 u 41 64 17 28.828 19.097 15.532
*ah.e-lista.pl 145.238.203.14 2 u 35 64 17 16.104 18.191 15.880
+51.255.141.154 37.187.5.167 3 u 35 64 17 15.257 17.014 16.439
root@ubuntu18-webadm1:/home/webadm1#
```

4.2.6. Verify Sync

Do the following steps to verify that the NTP daemon is really synchronizing the time. Query the system clock with the command `timedatectl status`.

```
root@ubuntu18-webadm1:/home/webadm1# timedatectl status
      Local time: Fri 2019-03-08 15:57:21 CET
      Universal time: Fri 2019-03-08 14:57:21 UTC
      RTC time: Fri 2019-03-08 14:57:22
      Time zone: Europe/Luxembourg (CET, +0100)
      System clock synchronized: yes
systemd-timesyncd.service active: yes
      RTC in local TZ: no
root@ubuntu18-webadm1:/home/webadm1#
```

Verify if the NTP synchronization works. First, disable NTP synchronization with `timedatectl set-ntp false`. Afterward, change the system clock with `timedatectl set-time 10:00:00`, for example.

```
root@ubuntu18-webadm1:/home/webadm1# timedatectl set-ntp false
root@ubuntu18-webadm1:/home/webadm1# timedatectl set-time 10:00:00
root@ubuntu18-webadm1:/home/webadm1# timedatectl status
      Local time: Fri 2019-03-08 10:00:05 CET
      Universal time: Fri 2019-03-08 09:00:05 UTC
      RTC time: Fri 2019-03-08 09:00:06
      Time zone: Europe/Luxembourg (CET, +0100)
      System clock synchronized: no
systemd-timesyncd.service active: no
      RTC in local TZ: no
root@ubuntu18-webadm1:/home/webadm1#
```

Now, enable the NTP synchronization with `timedatectl set-ntp true` and verify it with `timedatectl status`.

```
root@ubuntu18-webadm1:/home/webadm1# timedatectl set-ntp true
root@ubuntu18-webadm1:/home/webadm1# timedatectl status
      Local time: Fri 2019-03-08 15:58:18 CET
      Universal time: Fri 2019-03-08 14:58:18 UTC
      RTC time: Fri 2019-03-08 09:00:29
      Time zone: Europe/Luxembourg (CET, +0100)
      System clock synchronized: yes
systemd-timesyncd.service active: yes
      RTC in local TZ: no
root@ubuntu18-webadm1:/home/webadm1#
```

5. WebADM

WebADM connects regularly to an NTP server to check the server's clock. If it detects a drift then a message will be shown in the WebADM GUI under [Admin](#) and in the [Background Job Log File](#) under [Databases](#).

The screenshot displays the WebADM Enterprise Edition v2.0.15 web interface. The top navigation bar includes links for Home, Admin, Cluster, Create, Search, Import, Databases, Statistics, Applications, About, and Logout. The main content area is titled "WebADM Server Administration" and provides the following information:

- WebADM v2.0.15 (64bit) running on server webadm1.rcdevs.com (192.168.3.180) in cluster mode (2 servers). Currently handling 1 connection(s).
- Server Version Details: Apache/2.4.46 PHP/7.4.16 OpenSSL/1.1.1j
- Internal Server Time: 2021-03-23 15:59:00 Europe/Berlin (**NTP drift 10858 seconds**)
- Hardware Modules: No HSM Connected
- WebADM Features: WebApps (Enabled), WebSrvs (Enabled), Manager (Enabled)
- RCDevs Cloud Services: BASE, LICENSE, PUSH, SMS, PROOF (Connected)
- Active LDAP Server: LDAP Server 1 (192.168.3.180)
- Active SQL Server: SQL Server 1 (192.168.3.180)
- Active Session Server: Session Server 2 (192.168.3.181)
- Active PKI Server: PKI Server (192.168.3.180)
- Active Mail Server: SMTP Server (146.59.204.189)

Below the status information are six management cards:

- User Domains (7)**: Associate domain names with LDAP user search bases.
- Client Policies (12)**: Define custom policy settings for consumer applications.
- Access Devices (1)**: Hardware devices for badging and physical access control.
- LDAP Mount Points (5)**: Connect secondary LDAP servers to the tree view.
- LDAP Option Sets (1)**: Define LDAP tree constraints for your "other" administrators.
- Administrator Roles (2)**: Create admin role templates for your "other" administrators.

At the bottom, there are two columns of links:

- Licensing and Configurations**: Software License Details, LDAP Server Details, LDAP Server Schema, Memory Usage Details, Hardware Modules Details.
- Runtime Actions**: Download WebADM CA Certificate, Download WebADM SSL Certificate, Issue Server or Client SSL Certificate, Clear Admin Session Cache (2 KB), Clear WebADM License Cache.

A yellow warning banner at the bottom of the page states: "[Jobs] [2021-03-23 15:58:31] [webadm1.rcdevs.com] Server time drift of 10858 seconds is detected".

```
-bash-4.2# cat /opt/webadm/logs/bgjobs.log | grep NTP
[2019-02-12 15:52:47] [5756] Checking NTP server time drift... Ok (exact match)
[2019-02-28 13:43:25] [5568] Checking NTP server time drift... Ok (exact match)
[2019-02-28 13:50:16] [6055] Checking NTP server time drift... Ok (113 seconds)
-bash-4.2#
```

However, WebADM never synchronizes the server's clock. One can point the WebADM to any NTP server by adding it to the configuration file `/opt/webadm/conf/webadm.conf`.

```
-bash-4.2# vi /opt/webadm/conf/webadm.conf
#
# WebADM Server Configuration
#
...
# Misc options
#treeview_width 300
#treeview_items 1500
#default_portal Admin
#ldap_uidcase No
ntp_server "2.lu.pool.ntp.org"
```

```
-bash-4.2# /opt/webadm/bin/webadm restart
Stopping WebADM HTTP server... Ok
Stopping WebADM PKI server... Ok
Stopping WebADM Session server... Ok
Checking libudev dependency... Ok
Checking system architecture... Ok
Checking server configurations... Ok
```

No Enterprise license found (using bundled Freeware license)
